

Warfarin Pharmacy Dosing Service Analysis

Brian Gulbis, PharmD, BCPS

June 2016

Service Utilization

Annual Warfarin Utilization

Figure 1: Number of Patients Receiving Warfarin at MH-TMC, 2013-2015

Utilization of Pharmacy Dosing Service

Comparison

- Group 1 - Pharmacy Dosing Service
 - Consult placed within 48 hours of warfarin initiation
 - At least 60% of warfarin doses placed by pharmacist
- Group 2 - Traditional Dosing

Inclusion

- January 1, 2015 to December 31, 2015
- Age 18 years or greater
- Received at least 3 doses of warfarin
- Baseline INR < 1.5

Figure 2: Daily Warfarin Orders Managed by Pharmacy and Traditional

Figure 3: Percent of Daily Warfarin Orders Managed by Pharmacy Dosing Service

Figure 4: Warfarin Dosing Service Utilization Among Top 10 Medical Services Ordering Warfarin

Exclusion

- Concurrent DTI or TSOAC
- Liver dysfunction
 - AST and ALT > 5x ULN (concurrently)
 - ALT > 10x ULN
 - T.Bili > 3x ULN
- Missing goals of therapy data
- Readmission encounters

Results

Table 1: Demographics

	pharmacy	traditional	p
n	402	285	
Age (median [IQR])	58.00 [42.25, 68.75]	64.00 [54.00, 72.00]	<0.001
Sex = Male (%)	240 (59.7)	182 (64.1)	0.279
BMI (median [IQR])	28.48 [24.40, 33.54]	29.32 [25.18, 33.68]	0.277
Race (%)			0.096
- African American	104 (28.4)	74 (27.9)	
- Asian	12 (3.3)	1 (0.4)	
- Native Am.	0 (0.0)	1 (0.4)	
- Other	78 (21.3)	59 (22.3)	
- White/Caucasian	172 (47.0)	130 (49.1)	
Length of Stay (median [IQR])	12.10 [7.71, 19.83]	13.71 [8.04, 24.17]	0.103
Therapy = New/Previous (%)	270/132 (67.2/32.8)	143/142 (50.2/49.8)	<0.001
